Name of scheme	AXIS TREASURY ADVANTAGE FUND (An open ended low duration debt scheme investing in instruments such that the Macaulay duration of the portfolio is between 6 to 12 months) (Please refer to page no. 4 for concept of Macaulay duration)	
Investment objective	The investment objective is to provide optimal returns and liquidity to the investors by investing primarily in a mix of money market and short term debt instruments which results in a portfolio having marginally higher maturity as compared to a liquid fund at the same time maintaining a balance between safety and liquidity. However, there can be no assurance that the investment objective of the scheme will be achieved.	
Asset allocation pattern of the scheme	Under the normal circumstances, the asset allocation pattern will be:	
	Type of Instrument	Normal Allocation (% of net assets)
	Debt & Money Market Instruments*	0 - 100
	*Includes securitized debt (excluding foreign securitized debt) up to 65% of the net assets of the Scheme. The Scheme shall not invest in foreign securitized debt. The cumulative gross exposure through debt and derivative positions should not exceed 100% of the net assets of the Scheme in accordance with SEBI circular no. Cir/IMD/DF/11/2010 dated August 18, 2010. Investment in Derivatives - up to 50% of the net assets of the Scheme. The Scheme can invest up to 50% of net assets in Foreign Securities.	
Differentiation with existing open ended debt schemes (as on October 31, 2020)	The Scheme is not a minor modification of any existing scheme/ product of Axis Mutual Fund. Differentiation is as follows:	
	Axis Short Term Fund	
	Asset Allocation	
	Type of Instrument	Normal Allocation (% of net assets)
	Debt and Money Market instruments	0 - 100
	Units issued by REITs & InvITs	0 - 10
	Primary Investment Objective - The scheme will endeavor to generate stable returns with a low risk strategy while maintaining liquidity through a portfolio comprising of debt and money market instruments.	
	Investment Strategy - The scheme proposes to invest in a diversified portfolio of high quality debt and money market securities to generate stable risk adjusted returns with a low risk strategy. The Schemes portfolio construction will seek to play out the shape of the yield curve of different issuer classes. The fund manager will seek to look for investment opportunities at different maturities of the same yield curve (e.g. the government securities yield curve) as well as look at the differentiated levels of risk premium offered by the market to different class of issuers (e.g. 2 year yields offered by a government security, an NBFC and a manufacturing corporate).	
	Differentiation - An open ended short term debt scheme investing in instruments such that the Macaulay duration of the portfolio is between 1 year to 3 years AUM (₹ in crores): 12,286.10; No. of Folios: 56,988

Primary Investment Objective - The investment objective is to provide optimal returns and liquidity to the investors by investing primarily in a mix of money market and short term debt instruments which results in a portfolio having marginally higher maturity as compared to a liquid fund at the same time maintaining a balance between safety and liquidity.		
Investment Strategy - The risk-return profile of this fund positions it in between a liquid fund and short duration income fund. The portfolio strategy seeks to increase yield by having a marginally higher maturity and moderately higher credit risk as compared to a liquid fund at the same time maintaining a balance between safety and liquidity. The Macaulay duration of the portfolio of the Scheme will be maintained between 6 months - 12 months depending on the interest rate view. The Scheme stands to expose to market risk which can get captured partially by "mark to market component" thereby inducing a potential daily volatility. Also, the Scheme will have a mix of credits with a moderately higher credit risk as compared to a liquid fund. The Scheme will always aim at controlling risk by carrying a rigorous credit evaluation of the instruments proposed to be invested in. The credit evaluation will be carried out on the basis of the parameters mentioned above.

Primary Investment Objective - The scheme will endeavor to generate optimal returns while maintaining liquidity through active management of a portfolio of debt and money market instruments.		
Investment Strategy - Interest rates have a cyclical movement whereas yields fall, bond prices rise, while the reverse is true in the case when interest rates rise. The investment objective of this scheme is to maximize risk adjusted returns to the investor through an active management of the portfolio, by elongating the duration of the portfolio in a falling interest rate scenario and reducing the duration at a time when interest rates are moving up.		

Differentiation with existing open ended debt schemes (as on October 31, 2020) (Contd.)	<p>With the discretion to take aggressive interest rate/duration risk calls, this could mean investing the entire net assets in long dated Government securities and debt instruments (carrying relatively higher interest rate risk/duration risk), or on defensive considerations, entirely in money market instruments. Accordingly, the interest rate risk/duration risk of the scheme may change substantially depending upon the Fund's call.</p> <p>Differentiation - An open ended dynamic debt scheme investing across duration AUM (₹ in crores): 1,183.47; No. of Folios: 12,413</p>

	<p>Primary Investment Objective - To provide a high level of liquidity with reasonable returns commensurate with low risk through a portfolio of money market and debt securities.</p> <p>Investment Strategy - The Fund shall be managed according to the investment objective - to generate reasonable returns commensurate with low risk. As this Scheme is positioned at the lowest level of risk-return matrix, it is usually aimed to meet the needs of the Investors who want to deploy their funds for a short period of time.</p> <p>The composition of Indian debt market (both primary and secondary) at the front end of the yield curve is dominated by money market instruments. Accordingly, the Scheme will invest predominantly in money market securities with some tactical allocation towards other debt securities to enhance the portfolio return. The portfolio will be structured to incorporate asset-liability management based on seasonal/historic trends of liabilities. Given the usually observed nature of the profile of liabilities, the fund shall seek to maintain high liquidity with the use of cash/cash equivalent assets.</p> <p>As yield curve has been observed to be flat (overnight to 3 months) during most of the times, attempt will be made to space out the assets uniformly across the maturity buckets. Concept of Macaulay duration	<p>The Macaulay duration is a measure of a bond's sensitivity to interest rate changes. It is a measure of the average life of the bond taking into account the coupon payments as well as the repayment of principal. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Because it takes into account both coupons and maturity cash flows, it better reflects the relationship between interest rates and price of the bond.</p>																																						
Risk profile of the scheme	<p>Mutual Fund units involve investment risks including the possible loss of principal.</p> <p>Scheme specific Risk Factors are summarized below:</p> <p>The scheme carries risks associated with investing in debt and money market securities, derivatives, Foreign Securities, securitized debt, debt instruments having credit enhancements, short selling and securities lending. Investment in mutual fund units involves investment risks such as trading volumes, settlement risk, liquidity risk and default risk. Trading volume may restrict liquidity. The AMC may choose to invest in unlisted securities which may increase the risk on the portfolio. Also, the value of the Scheme investments may be affected by currency exchange rates, changes in law/policies of the government, taxation laws and political, economic or other developments.</p> <p>Investments in debt and money market instruments are subject to interest rate risk, re-investment risk, basis risk, credit risk, spread risk, prepayment risk, creation of segregated portfolio, etc. Please refer to the SID for further details.</p> <p>Please read the SID carefully for details on risk factors before investment.</p>																																						
Creation of segregated Portfolio	<p>In case of credit event, the Scheme may create segregated portfolio of debt and money market instruments in terms of applicable SEBI regulations/ circulars.</p>																																						
Risk management strategies	<p>Interest rate risk is managed by meticulous determination of average maturity (which is the expression for change in portfolio value for a basis point change in interest rate) of the portfolio. Extensive analysis of macro economic conditions is done to form a view on future interest rates and to position the portfolio accordingly. Credit risk is managed by in-depth analysis of issuer (financial/operating performance) with the help of internal and external research. Liquidity risk is addressed by maintaining exposure to cash/cash equivalents and highly liquid instruments.</p>

Additionally, the AMC may at its discretion send Account Statements individually to the investors.</p> <p>b) For Unitholders holding Demat Account: SEBI vide its Circular no. CIR/IMRD/DP/31/2014 dated November 12, 2014, in order to enable a single consolidated view of all the investments of an investor in Mutual Fund and securities held in demat form with Depositories, has required Depositories to generate and dispatch a single CAS for investors having mutual fund investments and holding demat accounts. In view of the aforesaid requirement, for investors who hold demat account, for transactions in the schemes of Axis Mutual Fund on or after February 1, 2015, a CAS, based on PAN of the holders, will be sent by Depositories to Investors holding demat account for each calendar month within 10th day of the succeeding month to the investors in whose folios transactions have taken place during that month. CAS will be sent by Depositories every half yearly (September/March), on or before 10th day of succeeding month, detailing holding at the end of the six month, to all such investors in whose folios and demat accounts there have been no transactions during that period. CAS sent by Depositories is a statement containing details relating to all financial transactions made by an investor across all mutual funds viz. purchase, redemption, switch, dividend payout, dividend reinvestment, systematic investment plan, systematic withdrawal plan, systematic transfer plan (including transaction charges paid to the distributor) and transaction in dematerialized securities across demat accounts of the investors and holding at the end of the month. Investors who do not hold demat account continue to receive CAS sent by RTA/AMC, based on the PAN, covering transactions across all mutual funds as per the current practice. In case an investor has multiple accounts across two depositories; the depository with whom the account has been opened earlier will be the default depository. The dispatches of CAS by the depositories constitute compliance by the AMC/ the Fund with the requirement under Regulation 36(4) of SEBI (Mutual Funds) Regulations. However, the AMC reserves the right to furnish the account statement in addition to the CAS, if deemed fit in the interest of investor(s). Investors whose folio(s)/demat account(s) are not updated with PAN shall not receive CAS. Investors are therefore requested to ensure that their folio(s)/demat account(s) are updated with PAN.
