Investment strategy	<p>The Scheme has dual objectives of generating income and capital gains while attempting to manage the risk from the market. In order to achieve the twin objectives, the Scheme intends to follow a top-down and bottom-up investment strategy. The top-down process would lead to the asset-allocation between equities and fixed income and the bottom-up process would lead to construction of the portfolio using specific securities.</p> <p>The Scheme would invest both in equities and fixed income instruments. Allocation between the two asset classes will be done using a quantitative asset allocation methodology. This methodology will be the primary tool to manage the overall risk of the portfolio in such a way as to achieve the objective of managing risk. The quantitative tool has been simulated with a target of limiting the downside to 5% in a calendar year. Within equities and fixed income, the portfolio would be actively managed to optimize returns within the respective asset class.</p>	The scheme seeks to provide superior risk adjusted returns through diversification across various asset classes such as equity, fixed income & gold that have historically shown low correlation with each other.
Risk profile of the scheme	<p>Mutual Fund units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:</p> <p>The Scheme carries risks associated with investing in equity and equity related securities, derivatives, debt and money market securities, foreign securities, securitized debt, short selling and securities lending.</p> <p>Investment in Mutual Fund units involves investment risks such as trading volumes, settlement risk, liquidity risk and default risk. The AMC may choose to invest in unlisted securities which may increase the risk on the portfolio. Investment strategy	<p>The scheme seeks to generate capital appreciation through an actively managed diversified portfolio of primarily larger Midcap companies. Larger Midcap companies combine the flexible, innovative, high-growth features of mid and small size companies with the proven management and liquidity of larger companies. The Fund intends to benefit from this "best of both worlds" characteristic of larger Midcap companies. The portfolio will be built utilising a bottom-up stock selection process, focusing on appreciation potential of individual stocks from a fundamental perspective.</p>		<p>The scheme aims to generate long term capital appreciation by investing in a concentrated portfolio of equity & equity related instruments of up to 25 companies. In order to have a concentrated portfolio, the scheme will follow a bottom up stock selection approach.</p> <p>The portfolio will be built utilising a bottom-up stock selection process, focusing on appreciation potential of individual stocks from a fundamental perspective. The AMC employs a "Fair value" based research process to analyse the appreciation potential of each stock in its universe (Fair value is a measure of the intrinsic worth of a company). The universe of stocks is carefully selected to include companies having a robust business models and enjoying sustainable competitive advantages as compared to their competitors.</p> <p>While 65 - 100% of the corpus will be invested in equities (no less than 20 companies and up to 25 companies), it is expected that under normal market conditions at least 80% of the corpus will be invested in equities (no less than 20 companies and up to 25 companies). The Scheme will primarily invest in companies among the top 200 in terms of market cap.</p>

Risk profile of the scheme (Contd.)	<p>equity related securities, derivatives, foreign securities, debt securities, securitized debt, money market instruments, short selling and securities lending.</p> <p>Investment in Mutual Fund units involves investment risks such as trading volumes, settlement risk, liquidity risk and default risk. Trading volume may restrict liquidity in equity and debt investments. The AMC may choose to invest in unlisted securities which may increase the risk on the portfolio. Also, the value of the Scheme investments may be affected by interest rates, currency exchange rates, changes in law/policies of the government, taxation laws and political, economic or other developments.</p> <p>Mid & small size companies may be more volatile & less liquid than larger companies.</p> <p>Investments in debt and money market instruments are subject to interest rate risk, re-investment risk, basis risk, credit risk, spread risk, prepayment risk, etc. to the extent of the Scheme's investments in such securities. Please refer to the SID for further details.</p>			<p>fixed income instruments, derivatives, foreign securities, securitized debt, short selling and securities lending.</p> <p>Investment in mutual fund units involves investment risks such as trading volumes, settlement risk, liquidity risk and default risk. Differentiation with existing open ended equity schemes of Axis Mutual Fund (as on August 31, 2014)	<p>For comparison of Existing Schemes, Investment Objective, Asset Under Management (AUM) and number of folios, please refer to point no. 7 on page 12 to 15.</p>																			
Investment Strategies	<p>The scheme will seek to achieve its investment objective primarily by employing various strategies which seek to exploit absolute returns opportunities in equity and derivative markets. In case such opportunities are not available, the scheme will invest the corpus in debt and money market instruments.</p> <p>The equity and derivative markets have experienced enormous growth in India in the last few years. The market provides the investor the ability to derive returns from the various strategies enumerated below. The market is not always efficient to the extent of mispricing in the derivative market and the underlying cash market. These techniques differ in that each method attempts to exploit a different form of imperfection in the underlying equity, debt and derivatives market and thus expose the investor to different forms of risk.</p>																			
Risk Profile of the Scheme	<p>Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:</p>																			

Risk Profile of the Scheme (Contd.)	<p>The scheme carries risks associated with investing in equity and equity related securities, derivatives, debt and money market securities, securitized debt, short selling and securities lending.</p> <p>No assurance can be given that the Fund Manager will be able to locate investment opportunities or to correctly exploit price discrepancies in the capital markets. Reduction in mis-pricing opportunities between the cash market and Future and Options market may lead to lower level of activity affecting the returns.</p> <p>In case of a large redemption, the scheme may need to reverse the spot-futures transaction before the date of futures' settlement. This eventuality may lead to basis risk.</p> <p>Investment in mutual fund units involves investment risks such as trading volumes, settlement risk, liquidity risk and default risk. Trading volume may restrict liquidity. The AMC may choose to invest in unlisted securities which may increase the risk on the portfolio. Also, the value of the Scheme investments may be affected by currency exchange rates, changes in law/policies of the government, taxation laws and political, economic or other developments.</p> <p>Investments in debt and money market instruments are subject to interest rate risk, re-investment risk, basis risk, credit risk, spread risk, prepayment risk, etc.</p> <p>Please refer to the SID for further details.</p>		
Key Risk Mitigants	<p>In comparison to an equity fund, there are certain additional risks which are associated with an arbitrage fund and the mitigants to such risks are as follows:</p> <p>Lack of arbitrage opportunities: The Fund will enter into arbitrage trades when such opportunities are available. If the yields on arbitrage are low, the fund would invest in debt securities and money market instruments.</p> <p>Price Risk: While arbitrage is a low risk strategy, there would be periods when the equity and derivatives market may not move perfectly in sync. However, these movements are temporary and at the time of expiry of derivatives the prices converge.</p> <p>Un-hedged positions in the portfolio (investments in equity shares without corresponding exposure to equity derivative) shall not exceed 10%. Also, the AMC has a team of experienced investment professionals and uses systems so that risks are managed effectively.</p>		
Plans and Options	<p>The Scheme offers the following Plans:</p> <ol style="list-style-type: none"> Regular Plan Direct Plan <p>Direct Plan : Direct Plan is only for investors who purchase /subscribe Units in a Scheme directly with the Fund and is not available for investors who route their investments through a Distributor.</p> <p>Each plan offers the following options:</p> <ol style="list-style-type: none"> Growth Option Dividend Option <ol style="list-style-type: none"> Dividend Payout Facility Dividend Reinvestment Facility <p>Default Plan : Axis Enhanced Arbitrage Fund – Direct Plan</p> <p>Default Option: Growth (between Growth and Dividend)</p> <p>Default Facility: Dividend Reinvestment facility (between Dividend Reinvestment and Dividend Payout facility)</p>

In case such opportunities are not available, the scheme will invest the corpus in debt and money market instruments.	
The equity and derivative markets have experienced enormous growth in India in the last few years. The market provides the investor the ability to derive returns from the various strategies enumerated below. The market is not always efficient to the extent of mispricing in the derivative market and the underlying cash market. These techniques differ in that each method attempts to exploit a different form of imperfection in the underlying equity, debt and derivatives market and thus expose the investor to different forms of risk.		
Differentiation - The scheme invests predominantly in debt & money market instruments issued by banks.
